

LineMaster 1" Diameter Frame Barricade

Heavy Duty, Low Cost Crowd Control

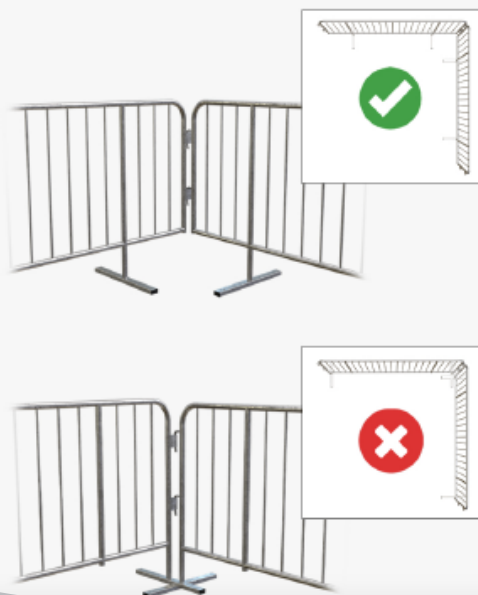

The 1" diameter frame of the LineMaster is a design innovation in the field of barricades. By combining 16 gauge, hot dip galvanized steel with an innovative 1" OD frame this barricade is able to handle heavy duty, permanent outdoor use but at an affordable cost.

The 21 uprights are set just 3.75" apart and are fully inserted into the frame before welding providing extraordinary strength. The feet can be set at the outside of the frame or inboard to provide greater support should the barricade be climbed on.

The inboard position also allows the barricades to be set at right angles. Supplied with Heavy Duty Feet for maximum durability or Bridge Feet for use on uneven ground such as grass. The barricades interlock using the industry standard hook and loop system fastening system so you can create a crowd barrier of any length.
